

# WORLDWIDE WINNERS AT TEMPERATURE - CONTROLLED STORAGE

## THE BELGIAN FREEZING AND COOLING INDUSTRY

## "TEMPERATURE-CONTROLLED STORAGE AT THE HEART OF EUROPE"

"Belgium is the country of worldwide winners for temperature-controlled storage. We are the ultimate country to accommodate your delicate goods with all peace of mind. Our companies know their business and ensure you the highest quality service fully in line with your requirements and desires.

Contact one of our members and you will be amazed by the flexibility and sense of initiative. Walk around any of our companies and you will notice unbelievable passion among our employees. Look at our approach, and you will be amazed by the modern warehouse management.

Belgium lies at the heart of Europe. We are perfectly accessible for the whole world thanks to four excellently equipped seaports. We also have the most modern cooling and freezing infrastructure close to these ports. These companies receive you with open arms and offer a whole range of services with extra added value. Roads, waterways and rail give open access to the rest of Europe and far beyond.

So why still wait? Choose Belgium!"

Chairman Xavier HASPESLAGH  
The Belgian Cold Storage Association

## PROFESSIONAL ASSOCIATION SINCE 1921

The Belgian Cold Storage Association (BVBVK) has played a coordinating and stimulating role throughout all evolutions in the sector.

In 1935 the BVBVK grew out of the 'Union Professionnelle Belge des Industries du Froid', which was established in 1921.

The BVBVK concentrates its efforts on all companies who in the logistics sector offer controlled temperature storage, cooling or deep-freezing activities and other related services to third parties.

## ANY PRODUCT SUPPLIED JUST-IN-TIME

The first Belgian cooling and freezing houses appeared after the First and Second World War. Different companies still operating today have their roots in those years.

The last ten years have seen major changes in the purchasing habits of the consumer. Individual consumer packaging is now the standard. That applies for just about everything: deep-frozen products, potato products, bakery products, chocolate, medicines, etc.

Each product must be supplied in the correct packaging on demand and just-in-time to the retail outlet, food service or wholesaler.

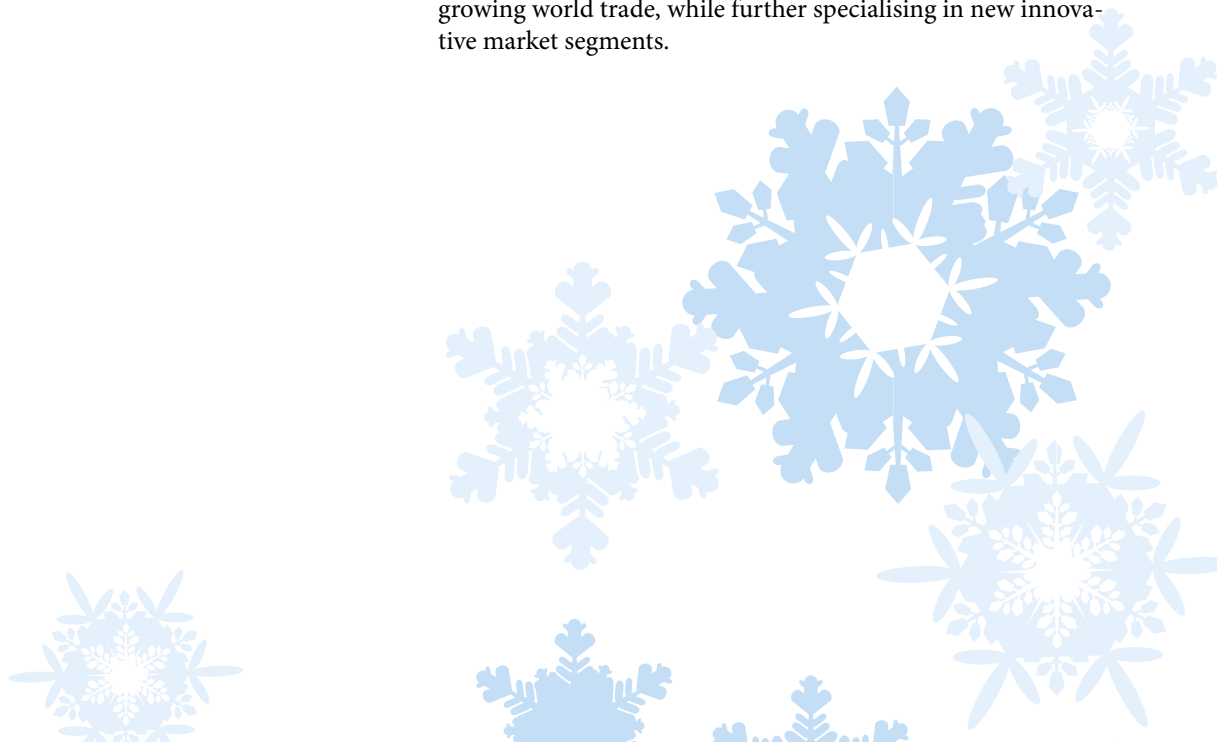

Food producers across the whole world are looking for specialised and reliable local partners to assist them with all their logistical activities including supply and packaging. Laws on environmental standards and food safety have also evolved at pace.

## HIGH EXPECTATIONS

This evolution requires cooling and freezing companies with sufficient capacity, far-reaching automation and full control of the whole storage process. Flexibility is required to respond to the high expectations of both the food producer and individual end consumer.

## INVESTING FOR THE FUTURE

The Belgian cooling and freezing industry has invested heavily in expansion and automation in recent years to be ready for growing world trade, while further specialising in new innovative market segments.

## THE BELGIAN COOLING AND FREEZING SECTOR IN FIGURES

Belgium has a total of some 53 specialised companies offering climatized storage services to third parties. Each company has its own strengths and its own accents in the field of extra services.

More than half of the companies are members of the Belgian Cold Storage Association.

Our members together possess more than 2.6 million m<sup>3</sup> of storage capacity. In Belgium more than 8,000 employees are employed in the cooling and freezing sector.

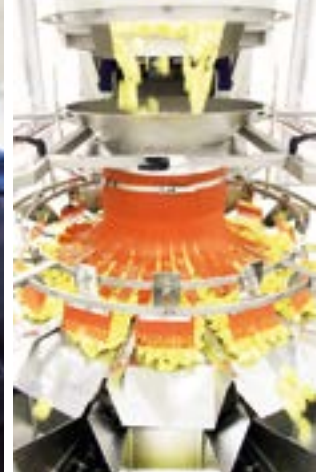

The sector has already been demonstrating attractive growth figures for a number of years. And the future also looks very promising. The ideal geographic location and the many access possibilities make Belgium the ultimate gateway to the rest of Europe.

Thanks to numerous investments in innovation, automation and expansion our companies are ready for the future.

Chris Mullie.

## "CONDITIONED STORAGE AND PACKAGED AS REQUIRED"

*Barias from Roeselare guarantees foreign food producers exporting to Europe a unique and complete service for the flexible packaging, storage and delivery of their deep-frozen or refrigerated goods. "We deliver goods just-in-time to retailers or food services in the required consumer packaging", explains business manager Chris Mullie.*

Barias is a solid concern offering a high added value to importers and food producers. Chris Mullie: "We receive the goods in bulk by container or trailer and store them in the right conditioned environment fully in line with the most stringent standards. We specialise in potato products, bakery products, vegetables, meat and fish."

### FLEXIBLE PACKAGING

Barias automatically or manually packages these goods in the appropriate packaging depending on the requirements of the end customer. "Practically any type of packaging is possible", explains Chris Mullie. "For retailer A a cardboard box in a blue colour and for retailer B the same product in a bag with a yellow colour? No problem at all! We possess a great diversity of packaging machines. Both small and large volumes can be processed. Our customers place their orders themselves, or we receive them directly

from the retailers or the food services. Anything is possible. The customer never remains with unsold stock and peak periods are simply taken care of. We package tailor-made and just-in-time depending on the orders arriving."

### THE CUSTOMER DECIDES

The food producers or importers decide which of Barias' services they wish to use. "We offer a full menu from which the customer is free to choose. We can design the packaging, have it manufactured and taken into stock, or the customer may provide the packaging himself. We can deliver the products or the customer may work with his own transporter. We can also provide the necessary support for administrative management and any return shipments. Each customer works together with one and the same contact person at Barias for the full monitoring of his operations."

### LOCATION

Thanks to the proximity of seaports in Zeebrugge, Antwerp and Calais/Dunkirk and the numerous good connections by road, Barias is an excellent operating base for France, Belgium, the Netherlands, Germany and the United Kingdom.

## OUR AMBITION?

# TO GROW TO BECOME A CENTRAL HUB FOR THE REST OF THE WORLD

*Our ambitions are not modest. Belgian freezing and cooling companies want to develop to become the ultimate central hub for the rest of the world. Customers, producers and importers with ambitions to export to Europe and who require temperature-controlled storage must see working with Belgian storage companies as the obvious choice.*

### OUR AMBITIONS ARE BASED ON STRONG FOUNDATIONS.

- Our knowledge and know-how has deep roots. Many companies still have a family nature. Young business managers of the second and third generation took the knowledge of their parents and added innovative ideas and ambitions for growth.
- Our cooling and freezing infrastructure is fully up-to-date and complies with the most stringent environment and quality standards. Numerous targeted investments and innovations have been implemented in recent years.
- We are the first country that thanks to legally imposed automatic control systems also suffices with regard to the strict European food safety regulations in practice.
- Just about all companies work on the basis of modern warehouse management with computer-controlled registration and monitoring. Full traceability is guaranteed.
- Our companies have a drive to innovate so can offer you numerous extra services as you desire.

## A REFRESHING VIEW ON LOGISTICS

*Expertise in logistics. This is what Colfridis stands for and what the Colfridis team pursues. Result: each day hundreds of thousands of deep-frozen products and other foodstuffs are stored and transported in a highly professional manner. Their know-how ensures that this gigantic operation takes place successfully day in day out.*

### YOU ATTACH GREAT IMPORTANCE TO SERVICE. WHAT DOES THAT MEAN FOR YOUR CUSTOMERS?

Luc Put, CEO Colfridis: "We assume that each customer is different. This is why we match our service to the needs of each individual customer. We provide a specific solution based on each specific request. We go to great lengths to make sure of this. 'No' is not a word in our dictionary. Our starting point is always: how can we realise what our customer wants?"

### HOW DO YOU PUT THE CUSTOMER-ORIENTED APPROACH INTO PRACTICE?

LP: "We have a strong staff of some 700 employees. They are people who know the logistics business through and through and have a certain professional pride. They keep a very close eye on the quality of the products stored in our warehouse. The ideal temperature for deep-frozen products, the best storage conditions for bananas or the careful handling of eggs; our customers can rest assured when it comes to such matters. That is something we make sure of."

### THE LOGISTICS SECTOR MUST HAVE FAR-REACHING FLEXIBILITY. HOW DO YOU SCORE HERE?

LP: "It is indeed our flexibility and efficiency that allow us to make the difference. Our operations run 24 hours a day. This gives the advantage that we can quickly respond to the needs of

our customers, while also ensuring optimum staffing to be able to offer competitive prices. Another aspect with which we can make the difference is our IT system. It is designed on the basis of the needs of our user. It is particularly the flexible and customer-oriented way of thinking that gives us such a high score."

*"A story of growth  
Colfridis has enjoyed a turnover increase of  
22% in the past five years."*

### YOU HAVE GROWN STRONGLY IN RECENT YEARS. HAVE YOU REACHED THE CEILING?

LP: "We are determined to continue to grow further. How are we going to do that? By continuing to excel in our logistical expertise. And by further refining our IT processes. We will also be grasping new opportunities with both hands. Another aspect that comes to mind is the e-commerce activities where we take care of the logistical process behind online shopping. We are already doing this for one customer today, and it is a market in which we want to grow."

### WHICH PATH DO YOU WANT TO FOLLOW IN THE FUTURE?

LP: "You can summarise our ambitions for the future as 'Lean & Green.' We will also be going flat-out for even more efficiency along with a smaller impact on the environment. An impossible combination? Not at all. Look at our drivers, who, thanks to eco-driving, are producing fewer CO2 emissions while also cutting fuel costs. This is another example of the logistical expertise with which we want to continue to make the difference for our customers in the future."

## WHAT CAN WE DO FOR YOU?

*A lot! Thanks to the large variety of cool and freezing companies you will always find a fitting solution to your requirements in Belgium. And if the solution is not yet at hand it will be developed in line with your needs.*

### OUR POSSIBILITIES GO MUCH FURTHER THAN JUST A STORAGE AND TRANSFER CAPACITY IN A CONDITIONED ENVIRONMENT:

- Fast-freezing and defrosting
- Repackaging of bulk goods in the required consumer packaging
- Labelling of your goods
- Order picking
- Full stock management with monitoring of the flows
- Maturing and further processing of fresh products
- Quality control
- Stripping and stuffing reefer containers
- Delivery of goods both at home and abroad in the required quantities on demand
- A complete local distribution network with cross-docking.
- Forwarding your goods to all destinations in Europe and beyond
- The customs processing of your goods
- Temporary storage and handling of goods in customs bonded warehouses.
- ...

## WHICH PRODUCTS?

*We offer bespoke solutions for all products, goods and objects which must be stored in a conditioned environment. This includes obvious products like fresh and deep-frozen foods, but other products can also be perfectly accommodated. Accordingly, we even have a special warehouse in which art and historical works can be stored in a stable climate with optimal air humidity. Anything is possible in Belgium.*

### FOOD

#### Fresh and deep-frozen

- Fruit
- Vegetables
- Meat
- Fish
- Butter
- Chocolate
- Bakery products
- Potato products
- Wine
- Ready-made meals
- Fresh herbs
- Fruit juices
- ...

### OTHER PRODUCTS

Wood  
Medicines  
Blood  
Gelatine products  
Tobacco  
Artworks  
...

Marc Verheyen.

## THE BEST CHOICE FOR COOLED AND DEEP-FROZEN STORAGE

*Van Soest Coldstores NV from Rijkevorsel is a company leading the way in the storage of deep-frozen products. It has no fewer than seven freezing tunnels with which it can freeze fresh products in under 36 hours. Exports are becoming an increasingly important part of the concern's activities.*

Van Soest Coldstores NV is known far beyond the national borders for its cooled and frozen storage services in the food business. The company provides a total package of services for all logistical needs such as handling, transfer and value added logistics (VAL). Its coldstore has a capacity of 20,000 pallets. "The goods flow – both ingoing and outgoing – is on a worldwide scale with experience in drawing up various export documents as an important advantage," explains business manager Marc Verheyen.

### RELIABLE AND FLEXIBLE

Processing companies in the meat, fruit, vegetables, fishing and dairy products sector choose the reliability and flexibility of Van Soest Coldstores NV. A passionate team of 30 employees ensures successful operations. Marc Verheyen: "We are accessible every working day from 6 a.m. till 8 p.m. and on Saturday mornings. "He also points out the benefits of outsourcing. "Whoever uses our services saves on storage space and personnel."

## "IF IT HAS TO BE COLD..."

*Vanden Avenne Vrieshuis uses the know-how and experience it has built up over the decades to offer you services of the very highest quality. Tunnel freezers, deep-freeze spaces, cold storage spaces and defrosting units are fully prepared to comply with your desires.*

Vanden Avenne optimises the handling of your products with conditioned loading and unloading spaces, short loading and unloading times, fast freezing times, special quick-freezing tunnels, hygienic spaces and modern fork-lift and reach trucks. "We have 140,000<sup>3</sup> metres of deep-freeze space," says director Geert Segaeert. "This together accounts for 35,000 europallets with extension work also soon to be started."

### GUARANTEED QUALITY

Vanden Avenne's core activities involve chocolate, vegetables, fruit, potato products, meat, butter and... blood plasma. Customers rely on the quality that Vanden Avenne strives for.

### REPACKAGING AND TRANSFER

Besides storage, Vanden Avenne also provides other services such as stickering your products, (re)packaging and transfer. Quality is the priority and ensured by the automated WMS system, a customer-oriented service, the storage of any pallet type and export licences for Russia or South Korea, for example. We can also take care of your customs formalities, and if required Vanden Avenne can also call upon its own transporter.

Kristof Van Lommel.

## "FINE-MESHED DISTRIBUTION NETWORK FOR THE BENELUX AND FRANCE"

*TDL Fresh Logistics offers domestic and foreign producers of food-stuffs and conditioned fresh products a fine-meshed distribution network in the Benelux and France. "From our two warehouses in Lummen and Doornik we serve retailers, wholesalers, food services and points of sale with fresh, refrigerated and deep-frozen products each and every day", explains commercial director Kristof Van Lommel.*

TDL Fresh Logistics possesses an extensive fleet to meet all the specific desires of the customer. A nice example are the multi-temperature vehicles with compartments guaranteeing temperatures between -18°C and +25°C. TDL Fresh Logistics also offers an express service throughout Europe for temperature-controlled cargo, large or small.

### FLEXIBILITY AND AUTOMATION

"We mainly stand out by our flexibility", tells Kristof Van Lommel. "We develop a logistics plan for each customer in line with the specific requirements. We adapt our set routes and schedules as necessary. In the Benelux we guarantee consignments according to an A/B delivery schedule or A/A schedule on request. Companies can contract all their logistical activities out to us, including warehouse services and order picking. We work with maximal automation for fast and efficient processing. Co-pack activities are also an option."

## WHY BELGIUM?

### AT THE HEART OF EUROPE

Geographically speaking Belgium lies at the heart of Europe. We are a short travelling distance from all of the most important European markets and metropolises.

By choosing Belgium you are choosing a location close to your European customer.

Stefaan Verhelst.

## "THE LARGEST INDEPENDENT HANDLER OF REFRIGERATED AND DEEP-FREEZE CONTAINERS IN THE PORT"

*With the Cold Store division, Luik Natie in Antwerp offers all necessary cooling and deep-freeze facilities for the storage and transfer of imported fresh products or the consolidation of fresh products for export. "In recent years we have grown to become the largest independent handler of refrigerated and deep-freeze containers in the port", states general manager Stefaan Verhelst.*

In 2013 Luik Natie celebrated its hundredth birthday. Throughout this long period logistics and the port have continued to be at the heart of the concern's operations. The company now has expansive and modern industrial premises on the left bank at the heart of the growing port in Antwerp.

Luik Natie has four divisions which together form an integrated logistics chain for the handling, transport and storage of goods. "We profile ourselves to the whole world as the ultimate gateway to the European markets", explains Stefaan Verhelst. "Antwerp is the port that is furthest inland and has excellent transport connections with the hinterland. We offer our customers added value as a one-stop-shop with the focus on speed, quality and communication."

### SEASONAL PEAKS

The Cold Store division is a very important part of Luik Natie. "Our extensive cooling and freezing facilities enable us to accom-

modate seasonal peaks without any problem", explains Werner Van Beek, commercial manager of the Cold Store division. "We have 4,500 pallet spaces for cooled storage. It is mainly perishables such as fruit, chocolate, dairy products, potatoes, and food-stuffs that are stored here. We have the same number of pallet spaces available in our deep-freeze zone. We store large quantities of fish, meat and butter here." Modern warehouse management puts the focus on the traceability of all goods. Luik Natie has also been awarded an ISO 22000 and Bio-certificate.

### OPTIONAL SERVICES

Luik Natie makes the difference with a number of optional extra services. "In real terms we mean packaging and labelling, shipping, customs formalities, fiscal representation, automatic control, an in-house border inspection point for sanitary controls by the Federal Agency for the Safety of the Food Chain, a quarantine deep-freeze unit and internal port transport. The customer says what he wants, we do what is necessary."

### FURTHER GROWTH

Luik Natie still has great potential for growth. Stefaan Verhelst: "We will be expanding further in the coming years. We are able to provide the required space. We are also devoting much attention to making our activities more energy efficient and reducing our ecological footprint."

## EXCELLENT TRANSPORT INFRASTRUCTURE

*Belgium is an excellent central hub for forwarding or distributing your goods to France, the United Kingdom, the Netherlands, Germany and the rest of Europe.*

### • FOUR SEAPORTS

Thanks to our four fully developed seaports (Antwerp, Zeebrugge, Ostend and Ghent) we have perfect accessibility to the whole world. With Antwerp we even have the seaport that is the furthest inland in Europe.

Most cooling and freezing companies are located at a short distance from these ports. Increasing numbers of companies are setting up in the ports themselves.

Each port forms a crossroads for multimodal transport to the hinterland.

### • BY RAIL AND MOTORWAY

Each port is connected by rail and motorway to the rest of Europe.

Belgium possesses the densest motorway network in the world. We also have connections with all our neighbouring countries by rail.

### • ACCESS BY WATER

We also have the Albert Canal as a modern waterway that directly connects the economic artery of Antwerp with Liège.

Along the Albert Canal there are different logistical transfer stations to load containers on lorries.

### • A VARIETY OF AIRPORTS

With an international airport in Brussels and different regional airports in Ostend, Liège and Charleroi there is also excellent access for air cargo.

## TOTAL LOGISTICS PARTNER FOR TEMPERATURE-CONTROLLED PRODUCTS

*The perfect approach for all food that must be stored at controlled temperatures: that's what you'll find at Stockhabo and Devagel. Under the leadership of Xavier Haspeslagh, this company from Moeskroen very quickly grew to become a faultless partner for 'dry storage' and the storage of deep-frozen and cooled foods.*

### WHAT EXACTLY DOES STOCKHABO DO?

Xavier Haspeslagh: "In 2001 we started operating on a relatively small scale with deep-frozen storage with 8,000 pallet spaces, mainly for chicken slaughterhouses and the deep-frozen industry. Today we serve just about all niches in the food industry where totally reliable storage at a controlled temperature is a crucial requirement. Besides our enormous capacity of pallet spaces (now 63,500) we also possess separate units for chocolate, shock freezing and tempering."

### HOW DOES STOCKHABO MAKE THE DIFFERENCE?

"Together with our sister company Devagel we guarantee minimal waiting times because all our loading bays are conditioned at a temperature of -18 °C and we can prepare up to 30 full loads. We also have an extremely high performing WMS and voice picking system for perfect control of data traffic. As regards accreditation we also possess the BRC, BI-BPD and HACCP automatic control certificates. We have also always operated with great flexibility

to meet the demands of our customers: on their request we have considerably increased our storage volume along with significant flexibility regarding opening hours. We also operate as a customs warehouse, and for important customers all data traffic can be automatically managed by ETC."

### SHEET

**HISTORY:** Founded in 2001 in Moeskroen with 8,000 pallet spaces. Two deep-freeze units were additionally built in two phases resulting in a capacity increase to 23,500 pallet spaces. The take-over of Devagel in 2010 saw a further doubling of the volume. In 2014 Stockhabo invested in a further deep-freeze unit with 16,500 pallet spaces.

**SPECIALISATIONS:** separate units for shock freezing, tempering and chocolate.

**ICT:** Stockhabo is a pioneer in cutting-edge automation solutions. "With our WMS (warehouse management system) our customers can monitor the stock of their goods online. Voice picking allows us to process orders at even greater speed. All our services make us a complete logistical service provider for all temperature-controlled food products."

The background of the entire page is a light blue, textured image of a Christmas tree. Overlaid on this are numerous white and light blue snowflakes of various sizes and shapes, some appearing to be falling or floating. The overall aesthetic is clean and festive.

## KNOW-HOW AND EXPERTISE

Belgian cooling and freezing companies stand out by their know-how and expertise. You entrust your goods to experts who know the ins and outs of the business.

## TRACING AND FOOD SAFETY

In Belgium you make use of an ultramodern cooling and freezing infrastructure with computer-controlled monitoring and follow-up at its heart.

Our storage systems are fully automated to respond to all logistical requirements at speed. The focus is on tracing from start to finish. You always know where your goods are located and in what conditions.

With an automatic control system, imposed by the Federal Agency for the Safety of the Food Chain, we are the first country to bring the strict European food regulations fully into practice.

## STORAGE WITH AN ADDED VALUE

Our companies offer you added value in all possible ways. We give you the best opportunities to concentrate on your core activities.

We take care of the whole logistical process.

## FLEXIBILITY IS IN OUR GENES

As a small country flexibility is in our genes. We make all the necessary efforts to respond to your desires and expectations.

Stijn Siongers.

## "IDEAL HUB FOR PACKAGING, STORAGE AND LOGISTICS FOR DEEP-FROZEN PRODUCTS"

*Are you in search of a Belgian or European hub for the packaging and storage of fresh and deep-frozen products? Siva frost has the latest technologies in-house to stay ahead of the pack as regards quality and range of services.*

In Dendermonde, not far from the Port of Antwerp and in the Brussels-Ghent-Antwerp triangle, Siva frost handles --- of fresh and deep-frozen products. "Here you can find multiple warehouses for storage between 0 and 4 C°, between 12 and 18 C° and deep-frozen products at -18 or -25 C°. This together accounts for 18,000 europallets," says Stijn Siongers of Siva frost.

### CO-PACKING FOR FROZEN FOOD

Siva frost packs and repacks products on two fully automatic and two semi-automatic packing lines. On our fully automatic lines we work with packages between 50g and 5 kg in the standard bags as found in the shop. Our range also includes upright bags with or without zip closure. Our lines give us the capacity to pack almost 200 tonnes a day. Combinations of automatic and manual packaging are also among the options.

### A HUB FOR BELGIUM AND EUROPE

Siva frost's main customers include large companies from the chocolate, baking and potato sector. We pack according to the requirements of the (retail) customers and store products up to the time of supply to the market. We also take care of clearing customs formalities along with quality controls and certificates.

### ADDED VALUE IN TRANSFORMATION

Further to our logistical activities we are continually looking to provide added value for our customers. We achieve this not only in transforming the packaging, but also with freezing and defrosting processes. With an extended shelf life these processes offer opportunities to our customers to export to areas previously beyond their reach.

### A QUALITY-CONSCIOUS 'GREEN' FAMILY BUSINESS

With almost 30 years of experience Siva frost has all the necessary quality certificates in its possession. "Everything is controlled by ERP software," says Stijn Siongers. "This enables us to guarantee perfect traceability with the coding of bags, boxes and pallets." The icing on the cake? The green nature of Siva frost: almost 80% of the energy is sustainable from our own solar panels and wind energy.

### INVESTING IN INNOVATION

Healthy growth of an average of 5 to 10 per cent is required to maintain the qualities of a family business such as Siva frost. "This is why we are continuously innovating," says Stijn Siongers. "We were the first in Belgium to use RFID for storage for third parties. And we were the first to draw up an HACCP plan in our sector. In 2015 we will be preparing for the future by completing our next major extension fully in line with this philosophy."

Peter Deweerdt.

## "THE ART OF INVISIBLE DOORS"

*In addition to the efficient AirStop technology already used for different applications for some time, Masterveil developed Powerstream as a revolutionary system to stop energy losses from open deep-freezers. "Here we offer a much more energy efficient alternative in comparison with traditional air curtain technology", says business manager Peter Deweerdt.*

The AirStop from Masterveil keeps the conditions in two spaces separate with an 'invisible door'. "Here we refer to gases, odours, temperatures and moisture - so much more than just the temperature. Powerstream takes matters another step forward for freezers. Much energy is lost each time the door is opened to drive goods in or out."

Traditional air curtains are limited to, simply put, 'heating' or 'cooling' the problem. "Our Powerstream invention - developed in cooperation with Ghent University - reduces air curtain energy consumption by up to factor ten. This represents gigantic savings", adds Peter Deweerdt.

### SOONER INVOLVEMENT IN THE PROJECT

While in the past Masterveil was mainly asked to apply the system to cold stores and freezer rooms, engineering offices are now looking to the technology at a much earlier stage. "Engineering offices are already calling upon us for construction or conversion projects at an early stage in their projects, something that is an extremely positive evolution. We are also seeing interest in our revolutionary system from abroad growing strongly."

Pascal Braecke.

## "STRAIGHT FROM THE SHIP INTO OUR STORAGE SPACE"

*With large areas of cooling and freezer space in Bavikhove (West Flanders) and at the Port of Ghent, Mipa Frost is an attractive gateway for importers of deep-frozen or fresh products. "The products go straight from the ship into our freezers or cold stores, ready for further transport to wherever the customer wishes", says founder and business manager Pascal Braecke.*

Mipa Frost grew out of Braecke Trading, a company trading in potatoes and other vegetables. Pasca Braecke explains more: "We have 4,000 pallet spaces in Bavikhove, while in the port at Ghent we have a further 75,000 m<sup>3</sup> of storage space available. We have both deep-freeze and refrigerated zones at temperatures of 2 to 4 degrees Celsius. In the port at Ghent we are also excellently equipped for the loading and unloading of reefer containers. When required we also assist our customers with customs formalities and any necessary prior and further transport."

### HIGH INVESTMENTS

In 2015 Mipa Frost will be investing heavily in an automated warehouse management system with remote stock monitoring. "We mainly store fresh vegetables, butter products, deep-frozen fries, potato products and deep-frozen meat. Besides potato and other vegetables producers in Belgium, we are also strongly targeting import companies."

## "YOU CAN PUT YOUR TRUST IN OUR RACKS"

*High quality storage and rack systems along with ingenious warehousing systems are of great importance in the refrigeration industry, an area in which Stow has specialised for years. Over the years the company has accumulated an enormous amount of expertise in the development and production of high quality racking systems for the storage of, for example, pallets, small parts and long goods. "We also have great expertise in the design and construction of platform systems," says commercial director Philip Mylle.*

With extremely solid storage and racking systems Stow endeavours to create a strong added value for its customers' logistical activities. "Our flexible and advantageous system solutions suffice with regard to the highest quality requirements on the international market. With three production plants and a dense sales and service network we are excellently equipped to serve our clientele as required. Our company forms part of the Averys Group and provides products and services in more than 30 countries, supported by the know-how of some 700 employees who continue to come up with innovative ideas and individual engineering."

### PRODUCTION ESTABLISHMENTS

Starting in 1977 with a factory in Wevelgem, Stow developed a number of further production facilities to meet the growing de-

mand. "In Dottenijs we have enjoyed the benefits of fully automated production since 2006. Ten years before we had already brought our plant in Shanghai (China) into operation, which was meticulously extended in 2008. We also operate a production unit in Karvina (Czech Republic)."

Stow's industrial racks consist of solutions for the storage of pallets and small goods, cantilever racks and mezzanine constructions.

Besides traditional pallet racks and drive-in racking, Stow also produces and specializes in mobile pallet racks and the Atlas shuttle solution - two products that have become very popular in coldstore environments.

### COMPREHENSIVE RANGE OF SERVICES

The high quality products are supported by an extensive package of services. Philip Mylle: "Our engineering and product development departments create warehouse solutions in line with the customer's needs. We also carry out periodic inspections of industrial storage systems and warehouses to guarantee optimum safety and sustainability. Our team of service technicians also provide maintenance and repair services."

# THE BELGIAN FREEZING AND COOLING INDUSTRY

## WHERE COOL IS ALSO COOL.

*Are you in need of a modern storage place where your food products can be stored at the right temperature and with the necessary care? Welcome to Frigo Fernelmont. The modern cooling and freezing house with more than 100,000 cubic metres of storage space and more than 15 years of experience.*

### YOU POSSESS A GIGANTIC STORAGE SPACE. HOW DO YOU ACQUIRE. 100,000 CUBIC METRES OF USEABLE STORAGE SPACE?

Tom Foriers, business manager at Frigo Fernelmont: "We offer bulk storage. We store large bulks of fresh foodstuffs in cubic boxes in cold storage spaces at a positive temperature. We neatly stack pallets or vessels in our deep-freeze units. We thereby utilise our available space as efficiently as possible. Another advantage of this method of storage is that we can carry out all operations with a fork-lift truck. This saves us a great deal of time and costs."

### YOUR CUSTOMERS SUPPLY DIFFERENT KINDS OF FOOD PRODUCTS. THAT ASSUMES DIFFERENT STORAGE PROCEDURES. HOW DO YOU DO THAT?

TF: "We know from experience what type of storage works best for what product. For example, you can store chicory at high quality for a whole year at -2 °C if you provide some extra moisture in the storage space. It is this type of knowledge that enables us to make the difference for our customers. And then there is our follow-up. The foodstuffs stored here are closely monitored. The peace of mind of our customers is also included in our services."

Luc Bulcaen.

## "REFRIGERATED LOGISTICS IS OUR SPECIALITY"

*In search of powerful added value in the deep-frozen food product supply chain? That is assured at Frigolanda! The company wants to actively cooperate with the customer in continually improving the logistical processes. "Great flexibility and constructive partnerships in the long term contribute to the success of our customers," says Luc Bulcaen.*

Frigolanda possesses its own storage capacity of no less than 75,000 pallet places in Belgium, the Netherlands, eastern Germany and Poland. "Besides flawless warehousing services, we guarantee the perfect follow-up of each order by means of intelligent systems for warehouse and transport management. Advanced automation ensures that the customer has all details of his goods flow at his fingertips."

Frigolanda also ensures fine-mesh distribution in the whole of the Benelux with a comprehensive and contemporary fleet of rigid and trailers. "Groupage and transfer in the shortest possible time is a core activity."

Frigolanda is IFS-certified and all employees set great store by our four core values (quality, discipline, sense of humor and creativity)."
